

WHAT'S NEW IN 7.2

Xythos Digital Locker 7.2 rises to today's campus collaboration challenge with everything a campus community needs to manage and share content on the web. Designed to work together common desktop applications through the ease of its new Web 2.0 interface, Xythos Digital Locker helps accelerate user adoption, improves compliance and reduces support requirements. Integrated social networking tools including Wikis, RSS and file tagging enhance collaboration options while process wizards simplify content organization. Expanded support of integration standards such as JSR-170 Level 2 ensures that Xythos can fulfill a critical role in the campus' application infrastructure.

“With Xythos, we’ve leveled the playing field. Xythos helps us to better support our highly-mobile community with a solution everyone can use.”

Paul Bishop
Santa Barbara City College
Vice President of IT

New Features and Functionality

Thumbnail view

Now, you can quickly identify images with the thumbnail view directly from the DL Web view. This new feature presents thumbnails for image formats like .tiff, .jpeg, .gif and others. PDF documents can be viewed by installing open source ImageMagik software. Other file types will present an icon based on the file's extension. Thumbnails can be resized and the view option can be saved as a default view for the user or for the folder.

Public and Private Comments

Sometimes you want all to view comments on a file or folder and other times comments should be reserved for certain users. The public and private comment feature allows you to do both and create, delete, and view file and folder comments. While public comments can be created and viewed by all, private comments can only be viewed by their author and document administrator.

Lock and Checkout

With DL 7.2, Lock and Checkout options are no longer buried in the Manage pages, providing quick and easy access to these important collaborative features. Simply use the right-click on the Web 2.0 interface or use the toolbar to lock and checkout documents. Built-in intelligence provides the appropriate option for each file. Non-versioned files are locked or unlocked as appropriate, while documents containing version control are either checked-out or in, as needed.

Xythos Digital Locker System Requirements

Configuration	Name / Version Requirements
Servers	Windows Server 2003 and 2008, Linux, Solaris®, IBM AIX®, HP/UX® and Mac OS X® Server
Application Server	Tomcat, JBoss, BEA Weblogic® IBM WebSphere® or another Application server supporting the Java Servlet 2.5 Specification
Web Servers	Apache Web Server, Microsoft IIS® or other HTTP 1.1 and WebDAV compliant web servers that work with a Java EE 5, Servlet 2.5, compliant Servlet container
Client Systems	OS: Windows(, XP, Vista, 7), Mac OS X, Linux, UNIX Minimum supported Browsers: Internet Explorer 6, Firefox 3, Safari 4 Any WebDAV client (including Windows®, Mac OS X® and Linux)

This avoids confusion on the correct action for various files types.

Relative date searches

Create more powerful saved searches using relative dates. For example, users can search for files created in the last six days, weeks, months or years.

Enhanced Quick Search

Make finding relevant content quicker and easier than ever before with the Enhanced Quick Search. This new feature reduces the need to use advanced search for Tags or even additional properties.

Quick View

Often, file names are not descriptive and do not adequately communicate the content of various documents. With the new Quick View feature, users can display the first page of a document or image alongside its metadata eliminating the need to download and open a file to view its content.

Other new features

Subscription expiration option helps users to easily clear old subscriptions that are no longer needed.

Bookmark and searches menus helps more easily find bookmarks and saved searches.

Bookmark folders improves the organization and finding of bookmarks.

Additional tagging options for folders, wikis and dropboxes.

Xythos is the document management and file collaboration partner of choice

If campuses need to:

- Simplify document and file sharing
- Automate manual document processes
- Improve document security and compliance
- Reduce unnecessary document printing
- Avoid large email attachments

Consider Xythos.

These and many more features can be found in the all new Digital 7.2. Xythos Digital Locker is part of the Xythos Digital Locker Suite. Find out more about how Xythos' open standards-based document management solutions empowers campuses to reduce costs, achieve complete accountability, and improve content collaboration initiatives.
